I love this game; however, FIX THE DOGGONE CONTROLS!! Let us as users configure our own controls.. Wolfenstein 3d in a different setting. Very good.. Well. First, I have to say that this game is not for me but still it can be very fun experience for somebody else. Buy this if you want retro feel and go to back old pc gaming days. For me these old 3d shooters can be too labyrinthine.. A fun game back in the day :) Not as good as Doom or as inventive as Wolfenstein 3D, but a pretty good game that is sadly often misrepresented because of it's close release to Doom. Basically, it's a more advanced space version of Wolfenstein 3D. It's very similar but has more weapon types, maps and a interactive system of questioning the scientist in the levels, quite advanced for its time. On the downside, compared to some of the best FPS games of the time, Blake Stone could run a bit stale at times, but far outshines the average Wolfenstein clone. This is properly not the best game for younger gamers to try, but for those who love Wolfenstein 3D or grew up with it, this is still a fun and pretty good game worth a try/retry. The Steam version works perfectly, haven't experienced any problems yet. Though, if you have another version already, there is properly no difference between running that through DOS Box and buying the Steam version.. My parents found Blake Stone: Aliens of Gold in the bargain bin at Kaybee Toys one day when I was 6 or so years old. I played this before I played Wolfenstein 3D and I have to say I prefer Blake Stone. It's a classic pixelated FPS with a bunch of dumb puzzles and dumber enemies, but it's a nice trip down memory lane and might give younger gamers a glimpse into what us old timers had to play when we were young.. Overall Rating: This game is a first person shooter. I'll admit it, I'm biased when it comes to these kinds of games. These are the games that got me into PC gaming when I was itty bitty. It's difficult to find a genuine old time first person shooter that I am not particularly fond of. Done by Apogee, which had a number of incredibly fun titles during it's time, this is essentially Wolfenstein 3D in space. The variation in weapons, enemies, and even mechanics makes this game a step forward in the FPS genre. Able to purchase items from vending machines with money that you pick up, instead of it only contributing to your score. It retains all the other fun secret passages, card keys, and everything else that made the FPS golden era what it was.. This game, to this day, still defeats me at its hardest difficulty. This is the measure I judge MS-DOS games on, and my bar is always set exceptionally high on these. I've been playing these DOS games since I was 8 years old, sometimes right from a floppy! What made this game better than Wolfenstein 3D was the unique keycard and innocent informant variables that kept the game above a simple "kill everyone" logic, it forced you to keep certain criteria in mind in order to get perfect floor ratings.. I used to play this game when I was a kid. I remember almost every secret area, and know where almost all of the bad guys are. xD This game was and still is very fun.
